

Moon shot Mission Update

August 31, 2021

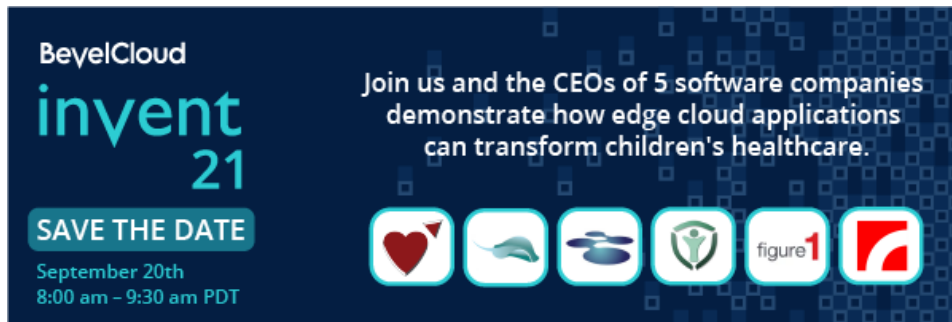

We are happy to share the latest news about our mission to transform children's healthcare by using an edge cloud to enable applications, which are able to use the data in 1,000,000 healthcare machines in all 500 children's hospitals in the world. All 438 of you on this list have contributed to this moon shot mission.

Early this year we were featured in Stanford's Pediatric Innovation Showcase (thanks Anshul). The video, titled *Accelerating AI Innovation in Pediatric Medicine* was just posted at https://youtu.be/aWEleBZHz_4. It's less than 4 minutes long. Thanks to Charitha Reddy, Clinical Assistant Professor, Pediatrics – Cardiology and Matt Lungren, Co-director of the AI in Medicine program at Stanford for participating.

The big news in August is the launch of BevelCloud Studio. Enabling edge cloud applications from simple collaboration to federated learning is the power of the technology.

We've invited several ISVs and a couple of research projects into the Studio. We're planning on featuring them at our first conference.

Hope the last days of summer are good. Stay safe.
